Portfolio: fqayyum273.github.io/Fatima-Qayyum | Blog: medium.com/@fqayyum73

PROFESSIONAL SUMMARY

Results-driven Data Analyst with professional experience delivering analytics, reporting, and business intelligence solutions across finance, operations, healthcare, logistics, and e-commerce. Specialized in transforming manual Excel-based workflows into automated Power BI and Looker Studio dashboards that give leadership a single, real-time view of business performance. Experienced working directly with international clients across US time zones in a fully remote environment, owning projects end-to-end from requirements gathering through to delivery.

WORK EXPERIENCE

AI Data House — Islamabad, Pakistan | Remote (Global Clients via Upwork)

Apr 2025 – Present

Data Analyst

Jan 2026 – Present

Junior Data Analyst

Apr 2025 – Dec 2025

Promoted from Junior to Data Analyst within 9 months based on performance and delivery quality.

- Owned end-to-end delivery of Power BI dashboards for a US-based workforce management company, migrating their manual weekly Excel reports into an automated reporting solution, reducing report preparation time from several hours to a single scheduled refresh.
- Built a payroll reconciliation and reporting system for a Germany-based staffing client, consolidating payment data from multiple sources and automating discrepancy flagging, eliminating a manual cross-checking process the client had previously done by hand each pay cycle.
- Designed and delivered an executive BI dashboard for a US-based professional services client, consolidating financial, project, and workforce data from QuickBooks Online and Monday.com into a single Power BI report. Giving the leadership visibility into profitability and utilization metrics they had not previously been able to track in one place.
- Built an order management and inventory reporting platform for a Canadian lumber company, automating daily stock and sales reporting that had previously required manual spreadsheet updates across thousands of inventory records.
- Developed a patient intake tracking and workflow automation system for US-based healthcare clinic, replacing a manual email-based coordination process and enabling the team to track registration and appointment status in real time.
- Built automated ETL pipelines connecting client business systems including QuickBooks, Monday.com, MySQL, Google Sheets, SharePoint, and CRMs to centralized reporting environments, removing manual data export and copy-paste steps from recurring reporting cycles.
- Worked directly with clients to gather reporting requirements, understand existing data structures, and iterate on dashboard designs until outputs matched what stakeholders actually used for decisions.

Truck It In — Islamabad, Pakistan | Transportation & Logistics

Jan 2025 – Apr 2025

Data Science Intern

- Analyzed 6 months of logistics and marketplace operational data to identify delivery performance trends, producing a finding report used by the operations team to prioritize process improvements.
- Built Looker Studio dashboards for 21 client companies, consolidating logistics KPIs that had previously been tracked across separate spreadsheets, giving account managers a single view per client.
- Defined and documented 80+ KPIs across 7 product areas, working with the team to agree on definitions and data sources for each metric before building reporting against them.
- Supported data preparation and business logic documentation for an AI-powered dispatch automation initiative.

CORE COMPETENCIES

Power BI (DAX, Power Query, Data Modeling) | Advanced Excel | SQL | ETL Pipelines | Looker Studio | Microsoft Fabric | Tableau | Python | Power Automate | API Integration

EDUCATION

BS (Hons) Computer Science — Fatima Jinnah Women University, Rawalpindi

2015 – 2019

CGPA: 3.66 / 4.00 | Ranked 3rd in Graduating Class

KEY PROJECTS

Business Intelligence & Executive Reporting Platform

- Consolidated data from 10+ systems (QuickBooks Online, Monday.com) into a multi-page Power BI Executive Dashboard with automated ETL pipelines and SQL data models covering profitability, labor utilization, cash flow, and project performance KPIs.

Payroll Automation & Workforce Payment Platform

- Built automated payroll and payslip generation platform supporting 1,200–1,400 employees, automating payout workflows, PDF generation, email delivery, payment validation, and reconciliation.

Lumber Operations Management Platform

- Led migration from spreadsheet-based system to cloud platform (Supabase + Vercel) with inventory, sales, shipment, and reporting modules managing thousands of transactions.

Healthcare Workflow & Patient Management Automation

- Built clinic-wide patient intake and workflow automation platform processing hundreds of monthly patient requests with Google Chat API integration.
